Summary

AI-Powered Full Stack Developer, specialising in MERN stack development, workflow automation, and agentic AI systems. Built production-ready applications integrating LLMs, n8n automations, and real-time APIs. Passionate about designing intelligent, autonomous workflows that solve real business problems.

Skills

Frontend	React, HTML, CSS, Tailwind CSS
Backend	Node.js, Express, Socket.IO, FastAPI
Databases	MongoDB, MySQL
Automation	n8n, Webhooks, API Integrations
Machine Learning	Python, Pandas, NumPy, Scikit-learn, Supervised Learning, Unsupervised Learning, Model Evaluation
AI / Agents	LLMs, LangChain, LangGraph, Prompt Engineering, Agentic Workflows, RAG

Experience

- Summer 2025 **Full Stack Intern, nuSoft, Pakistan**
- Contributed to **nuTalent**, nuSoft's internal HR platform, implementing new frontend features using Next.js and SCSS.
 - Built an AI-powered **Resume Analyzer** that parses resumes, extracts structured data, and evaluates candidate skills using LLM-driven techniques.
 - Collaborated in an agile team environment, participating in code reviews and feature planning across a 2-month engagement.
- Summer 2024 **IT Intern, NLC (National Logistics Corporation), Pakistan**
- Assisted the IT department with network configuration and maintenance tasks across operational infrastructure.

Projects

- SmartSite **React, Node.js, MongoDB, n8n**
In Progress AI-powered portfolio generator that automates the full lifecycle of managing personal portfolio websites. Uses n8n automation pipelines and webhooks to keep content dynamically up to date without manual intervention.
- Debate Agent **Python, FastAPI, LangGraph, Groq LLM, Tavily API**
Designed an autonomous multi-agent debate platform where AI agents independently research, argue opposing perspectives, and critique one another before an AI judge evaluates the discussion. Implemented iterative refinement loops, stateful agent orchestration with LangGraph, live web search integration, and a FastAPI backend powering a real-time web interface.
- MailMind **n8n, APIs, WhatsApp**
Built an autonomous email agent that continuously monitors an inbox, classifies incoming emails by category, and delivers concise summaries to the business owner via WhatsApp, reducing email triage time.
- FlowMind **n8n, APIs, Notion**
Designed an agentic automation workflow in n8n that interprets natural-language user inputs and routes structured data directly into Notion databases via API, eliminating manual data entry.

Resume **React, Node.js, AI**
Analyzer Developed during internship at nuSoft. Processes uploaded resumes to extract key information, score candidate skills against job criteria, and surface structured insights using AI-driven analysis.

Courses & Certifications

DeepLearning.AI AI Agents in LangGraph
Coursera Deep Learning Specialization — In Progress
Coursera Retrieval-Augmented Generation — In Progress

Education

2023–2027 **BE Software Engineering**, *NUST (National University of Sciences & Technology)*, Pakistan
Relevant coursework: Data Structures, Algorithms, Web Development, Database Systems, Software Engineering
